

# One Touch Cavity Release System

Spring loaded cavity door retrieving system

# One Touch Cavity Release System

**The One Touch Cavity Release System is a neat alternative to edge of door hardware for retrieving doors from cavity pockets.**

The system works by loading a spring mechanism when opening the door (specifically the last 15mm). Once the spring is charged, simply push on the door edge to release the spring catch and the door is propelled up to 100mm from the pocket. Finish your flush, concealed cavity door and eliminate door hardware with the One Touch Cavity Release System.

Note: Glazed doors require available depth of 120mm.

## Features & Benefits

### Easy to Fit

*Fast and simple installation*

### Versatile

*Use with new or existing timber doors*

### Durable

*Long life in service*

### Fit & Forget

*No maintenance required*

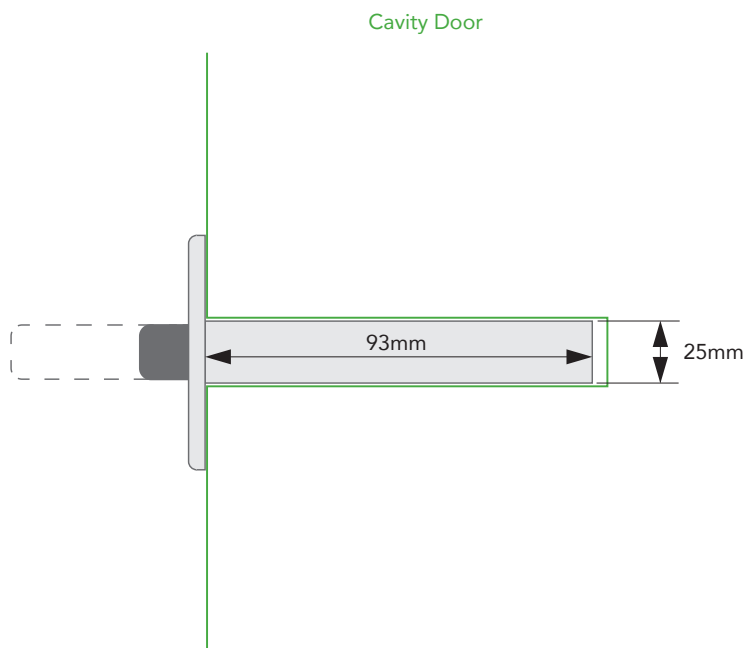

### Concealed

*No edge hardware needed*

## Installation Instructions

**What you need:** 1x One Touch Cavity Release System, 2x Screws (supplied), Drill, 25mm Speed Bore Bit, Tape Measure

### Step 1

On the back edge of the door, measure 1200mm up from the bottom of the door and mark this at the centre.

### Step 2

Using a 25mm speed bore bit, drill a hole to a depth of 100mm.

### Step 3

Firmly push the Cavity Release System into the drilled hole and secure with the two screws supplied.
