

METINNO[®]

1000 Series

Centreline Glazing System

- Available in natural anodised or mill finish for powder coating to any colour
- Used in conjunction with the Metinno 2000 & 5000 Series, provides unlimited options
- Compatible with timber and glazed aluminium doors

A favourite for it's versatility, pair with any door

The Metinno 1000 Series forms the basis of the Metinno Aluminium Partitioning range, combining a cost efficient, aesthetically pleasing and practical solution to the needs of today's office environment into one unique system. The suite is characterised by a consistent 32mm profile which many other systems are unable to achieve.

The section's design eliminates unsightly vertical join lines to the face of extrusions, producing an aesthetically pleasing result. The Metinno 1000 system offers a large range of extrusions to accommodate for almost every conceivable situation. The system will accommodate 35mm, 40mm or 45mm doors, timber or glazed aluminium.

1000 Series

Maintain visual balance with centre glazing & a slim profile

The system provides a consistent 32mm profile when interchanging between applications where a 64mm, 76mm or 92mm stud framing is being used with 13mm plasterboard.

Deep pocket main frames improve the ability to greatly reduce noise transfer, improving acoustics within a space. The deep pocket allows extra stability due to direct fixing, while creating a simpler installation process, saving time and costs on site.
